New Oil Coolers

ATP Industries Group distributes a growing range of new OEM quality transmission oil coolers for applications such as JCB, ZF, Volvo, Scania, DAF, MAN and Voith transmission.

ATP recommend that each time the transmission is rebuilt or replaced the oil cooler should be changed as, due to the cooler design, it is impossible to guarantee that all debris is removed from the cooler by simply flushing it through.

This debris can later result in blocked oil ways and subsequent transmission failure.

The oil to water coolers are manufactured and tested to OEM specification from high grade materials to ensure a durable and reliable product to provide excellent value for money.

These oil coolers are supplied with a 12 month/unlimited hours warranty.

Delivery to site is usually within 24 hours.

Many more Coolers available on request.
